

IT & Security Management Problem Solved

Comodo IT & Security Manager Advanced Endpoint Protection

Product overlap and multiple management tools leave you with limited visibility and potential security gaps. Comodo ITSM brings all your IT management needs together into a unified platform that streamlines operations and reduces risk.

Complete Security from Malware Attacks

Comodo IT and Security Manager provides a single consolidated dashboard of all devices and their status. IT admins can easily act on issues, report on current risk, and push changes. This complete management system, combined with the unprecedented [malware protection](#) of Comodo's Default Deny Platform, reduces risk, reduces complexity and provides your admins with the resources they need.

Comodo's IT and Security Manager allows for the configuration of security policies and visibility into the security posture and health of your enterprise endpoints, while the ITSM Mobile Device Manager and Inventory Manager allow for the remote provisioning, configuration and control of android, iOS and Windows devices. Providing the essential Specialized Threat Analysis and Protection (STAP) identified as essential by IDC to protect organizations against advanced threats.*

In the past, organizations had to deploy multiple solutions to accomplish these tasks. Today, Comodo has integrated these critical components under a single, unified cloud-accessible Advanced [Endpoint Protection](#) management platform.

As the world's #1 leading digital Certificate Authority, Comodo ITSM benefits from the world's largest repository of signed applications, OS processes, trusted publishers to quickly identify the known good. In contrast Comodo Threat Research Labs (CTRL) visibility into over 85 million AV users, provides key insight into known bad processes and executables. All other unknown processes and executables are automatically run in Comodo's pending Container technology. This provides a safe container for running unknown files while a verdict is being determined.
